

  
**FliteCharts Data Alert 1938**

**TO:** Users of all Garmin aviation products and Garmin Pilot using North America, US, or Eastern US FliteCharts database

**DATE:** May 28, 2019

**CYCLE:** 1905 and 1906

**SUBJECT:** Incorrect geo-referencing for approaches at KGVQ

**DESCRIPTION**

The geo-referencing is incorrect for the VOR A and RNAV (GNSS) 28 approach charts at GENESEE CO (KGVQ), Batavia, New York in the US, North America, and Eastern US FliteCharts databases for cycles 1905 and 1906.

**PILOT ACTION**

Do not refer to georeferenced aircraft position on the affected approach in FliteCharts.

**NOTE**

Never maneuver the aircraft based solely upon the geo-referenced aircraft symbol. As indicated in the pilot's guide, geo-referencing is provided for situational awareness only.

*Alerts are written for the currently effective cycle and next cycle. It is possible that data from prior cycles is also affected. Garmin recommends using the latest effective data cycle.*

**RESOLUTION**

Geo-referencing of the above procedures will be corrected in the 1907 cycle of the North America, US, and Eastern US FliteCharts databases for applicable Garmin aviation products and in Garmin Pilot. Cycle 1907 FliteCharts databases are effective June 20, 2019 and will be available June 18, 2019.

**THIS ALERT SHOULD BE MADE AVAILABLE TO ALL USERS OF GARMIN AVIATION UNITS OR SYSTEMS USING A NORTH AMERICA, US OR EASTERN US FLITECHARTS DATABASE**

*Garmin requests that the flight crew report any observed discrepancies related to database information. These discrepancies could come in the form of an incorrect procedure, incorrectly identified terrain, obstacles, fixes, or any other displayed item used for navigation or communication in the air or on the ground. Go to [fly.garmin.com](http://fly.garmin.com) and select "[Aviation Data Error Report](#)."*
